Thank you Commissioner Long for your kind message of this morning, April 18, 2011. I am glad that you were able to find some information on your well. Yes, your well's driller's notes describing the formations, and their corresponding depths, will be a great help for our analysis of the Goliad Project. The more site specific data we have, the better.

As you know, we are interested in understanding and predicting, through modeling work, the movement of water within the aquifer. For this reason, it is also important that we have good estimates for the production rates of domestic wells. So, if it is also within your capabilities to provide information on the amount of water taken out of your well in say, gals/day over a certain period of time, I would greatly appreciate it.

Thank you again for your efforts in spotting these data and for staying in touch. I look forward to hearing from you again. Have a great week, sincerely,

José Eduardo Torres - 6WQ-SG Ground Water/UIC Section EPA, Region 6 (214) 665-8092

Mr. Torres.

After much searching I have not been able to retrieve my well drillers report, I have however been in contact with the driller who was able to find his old field notes with the soil type and depths as well as the date it was drilled will this be sufficient information?

Thank You

Ted Long

Mr. Torres,

Just to let you know that I am still looking for my well report I am sure I still have it just not sure where.

Sincerely Ted Long

Thank you Commissioner Long for your prompt response and for the provided information. The TNRCC form that you saw was provided by one area resident as the completion report for his water well. It is possible that the same contractor drilled your well, therefore the similarity in some of the information. Yes, you can send a hard copy of the report to my attention when you find it. You may address it to the Regional office address: 1445 Ross Avenue, Suite 1200, Dallas, TX 75202. Please include my mail code: 6WQ-SG. If it is within your capabilities to also provide information on the amount of water produced by your well in say, gallons per day, over some period of time, that would be fantastic. Thank you again for your kind reply and attention in this matter, have a nice weekend. Sincerely,

José Eduardo Torres - 6WQ-SG (214) 665-8092

Date: 01/21/2011 07:20 PM Subject: Re: A Request Good evening Mr. Torres,

It was good to see you and and your coworkers on Wednesday, Your interest in this matter is very much appreciated.

The home on the far east side of 0001.bmp would be mine and the other residence just to the west would be where my nephew and his family that I spoke of live.

The photo titled 0002.bmp is of a place that I have a grass lease on belonging to Bruce and Randy Liesman, there is an old camp house there but no one lives on the property at this time. I will search for my well report and attempt to furnish same to you, I may need to fax it to you rather than scan and email. or possibly copy and mail it. I believe however that the report you have scanned and sent to me is mine as the date seems correct and the driller is correct. It is kind of hard to make out some of it so I cannot say with certainty that it is.

Again, Thank You for taking the time out of your busy schedule to visit with us on this very important matter.

It was a pleasure to see you again during the meeting with our Regional Administrator this past Wednesday. As you heard, the UIC team in this office continues to be busy reviewing technical data, and that is the main reason for writing to you today. I would like to check with you on the possibility of confirming/obtaining some water supply well (WSW) data.

Attached are two image files depicting satellite views of what I suspect might potentially be WSW locations, one of which may be familiar to you. These potential locations are found, as you can see, immediately south of FM Road 1961 and east of Highway 183 in Goliad County. If you could kindly identify, and let me know, which one of these two is your well location by noting the image file name, I would appreciate it.

Also attached are a water supply well schematic and a Texas water well report (former TNRCC's form 0199). The attached schematic was drawn using the information in the water well report. If you happen to have a similar water well report for your supply well, or any other similar piece of information describing in detail the completion of your water well, I would appreciate your sharing a copy of the same with us, so that we can prepare a schematic with site specific data, for use in our aquifer simulation work and technical analysis.

I hope that you and yours are doing fine, I look forward to hearing from you. Have a nice weekend. Sincerely,

José Eduardo Torres - 6WQ-SG Ground Water/UIC Section EPA, Region 6
